Utah's Vital Statistics Mortality by Cause, Sex, Age And Autopsy, Residents: Utah, 2001

November 19, 2002
Technical Report No. 220

Mission Statement

The Office of Vital Records and Statistics administers the statewide system of Vital Records and Statistics by documenting and certifying the facts of births, deaths, and family formation for the legal purposes of the citizens of Utah, participates in the National Vital Statistics System, and responds to the needs of health programs, health care providers, businesses, researchers, educational institutions and the Utah public for data and statistical information.

PREFACE

This report contains mortality data for residents of Utah who died in 2001. The source of the data are certificates registered in the calendar year in the Office of Vital Records and Statistics, Utah Department of Health.

The contents of this report serve to make commonly used vital records data available to health programs, health care providers, businesses, researchers, educational institutions and the Utah public. Data are presented at the state level by cause of death, age, sex and whether or not an autopsy was performed for residents of the state who died in 2001.

International Classification of Diseases, 10th Revision (ICD-10)

Deaths which occurred anywhere in the United States in 1999 were, for the first time, coded and tabulated using the World Health Organization (WHO) tenth revision of the International Classification of Diseases. The ninth revision of the ICD was first used to classify mortality in 1979 and remained in effect through 1998. The tenth revision of the ICD includes changes to coding rules, category names and ICD numbers and changes to the tabulation lists used to produce mortality statistics under ICD-10.

Differences Between ICD-9 and ICD-10

The ICD is changed periodically because of the need to stay abreast of medical advances in disease nomenclature and etiology. As with previous revisions of the ICD, the change to tenth revision resulted in a much more detailed classification, about 8,000 categories compared with about 4,000 categories in the ninth revision. ICD-10 uses 4-digit alphanumeric codes compared with 4-digit numeric codes in ICD-9.

Discontinuities in Time Series

Each revision of the ICD has caused discontinuities in trend data. Many new categories for cause of death exist in ICD-10 and some categories from ICD-9 have been eliminated. More significantly, mortality rates due to certain causes changed sharply, simply as a result of revisions to the classification system. The effect of discontinuities in mortality trends should be dealt with in mortality analysis by the application of Comparability Ratios to adjust earlier cause-specific mortality rates to be consistent with cause specific mortality rates for 1999 and later years. Comparability Ratios were derived from the analysis of a large sample of death certificates that were double-coded by the National Center for Health Statistics (NCHS), first using ICD-9, then again using ICD-10. Comparability Ratios for the 113 causes of death which appear in Tables A39a and A40 of the birth and death report can be found on the Office of Vital Records and Statistics web-site, <http://www.health.state.ut.us/bvr>.
